Naccari, Andrea

1841 - 1926

DEGREE: PhD (math)

DATE: 1862

PLACE: Padua

TEACHER/RESEARCH ADVISOR: Rossetti

studied the thermoelectric properties of metals, the photoelectric effect of metals immersed in liquids, and the electrical conductivity of gases and liquid dielectrics; showed that the variation in the electrical resistance of distilled water was due largely to the solubility of the glass of the receptacle in which it was contained.
